Experimentell policyutveckling

The country needs and, unless I mistake its temper, the country demands bold, persistent experimentation. It is common sense to take a method and try it: If it fails, admit it frankly and try another. But above all, try something.

(Franklin D Roosevelt, 22 May 1932)

FINLAND: The world's first country with truly experimental governance

Experimentation direction for Deputy Heads

Context

This document reinforces the Government's commitment to devote a fixed percentage of program funds to impact to instill a culture of measurement, evaluation and innovation in program and policy design and Deputy Heads on how to implement this commitment.

Regulatory sandbox

First published: 11/05/2015 | Last updated: 22/10/2018

The regulatory sandbox allows businesses to test innovative propositions in the market, with real consumers.

The sandbox is open to authorised firms, unauthorised firms that require authorisation and technology businesses. The sandbox seeks to provide firms with:

- the ability to test products and services in a controlled environment
- reduced time-to-market at potentially lower cost
- support in identifying appropriate consumer protection safeguards to build into new products and services
- better access to finance

The sandbox also offers tools such as restricted authorisation, individual guidance, informal steers, waivers and no enforcement action letters. Find out more information about [sandbox tools](#).

We closely oversee tests using a customised regulatory environment for each test – including safeguards for consumers.

Sandbox tests are expected to have a clear objective (e.g. reducing costs to consumers) and to be conducted on a small scale, so firms will test their innovation for limited duration with a limited number of customers.

Supervisory strategy

Regulatory Sandbox

The AFM and DNB want to offer more room for innovation to enable market participants to roll out their innovative products, services or business models. Our regulatory sandbox is available to all financial enterprises wanting to test innovative financial concept. This initiative can be used by existing and new firms.

Fintech Supervisory Sandbox (FSS)

The Fintech Supervisory Sandbox (FSS), launched by the HKMA in September 2016, allows banks and their partnering technology firms (tech firms) to conduct pilot trials of their fintech initiatives involving a limited number of participating customers without the need to achieve full compliance with the HKMA's supervisory requirements. This arrangement enables banks and tech firms to gather data and user feedback so that they can make refinements to their new initiatives, thereby expediting the launch of new technology products, and reducing the development cost.

In the light of the experience obtained in operating the FSS, the HKMA upgraded the FSS to FSS 2.0. FSS 2.0 has the following new features:

- A [Fintech Supervisory Chatroom](#) (Chatroom) to provide feedback to banks and tech firms at an early stage of their fintech projects;
- Tech firms can access the Sandbox by seeking feedback from the Chatroom without going through a bank; and
